

BUSINESS QUESTIONS:

Question 1

What is the overall level of customer satisfaction?

Findings: The analysis of **23,486 customer reviews** shows that customer satisfaction is generally high, with most reviews receiving **4 and 5 stars**. This indicates that most customers are satisfied with the products purchased.

Key Insights

- Customer reviews are heavily concentrated in the higher rating categories.
- Low-rated reviews (1–2 stars) represent a relatively small proportion of total reviews.
- Overall customer satisfaction remains strong across the product catalogue.

Executive Insight

Maintain the company's current product quality standards while continuously monitoring low-rated reviews to identify recurring issues before they affect customer loyalty.

Question 2

Which product departments receive the highest customer ratings?

Findings:

Department Average Rating

Bottoms	4.29
Intimate	4.28
Jackets	4.26
Tops	4.17
Dresses	4.15
Trend	3.82

Key Insights: **Bottoms** received the highest customer rating (**4.29**) while **Trend** recorded the lowest average rating (**3.82**). All major departments achieved ratings above **4.0**, except Trend.

Executive Insight: Replicate the product quality standards of the Bottoms department while investigating customer complaints within the Trend department.

Question 3

Which product classes receive the highest customer engagement?

Findings:

Product Class Reviews

Dresses	6,319
Knits	4,843
Blouses	3,097
Sweaters	1,428
Pants	1,388

Key Insights:

- Dresses generated the largest volume of customer reviews.
- Knits and Blouses also received substantial customer engagement.
- These product classes are likely among the company's most purchased products.

Executive Insight

Prioritize inventory planning and quality monitoring for Dresses, Knits and Blouses because improvements in these categories will impact the largest number of customers.

Question 4

Which product classes receive the highest and lowest customer sentiment?

Findings:

The analysis of customer sentiment shows that Dresses, Knits, and Blouses received the highest number of positive reviews, reflecting their popularity among customers. However, these product classes also recorded the highest number of negative reviews due to their high review volumes.

Product Class	Total Reviews	Positive Reviews	Negative Reviews	Negative Review Rate
Dresses	6,319	4,792	689	10.9%
Knits	4,843	3,721	506	10.4%
Blouses	3,097	2,355	348	11.2%

Key Insights:

- Dresses received the highest customer engagement with 6,319 reviews, including 4,792 positive reviews, indicating that the product class is generally well received despite recording 689 negative reviews.
- Blouses recorded the highest Negative Review Rate (11.2%), slightly higher than Dresses (10.9%) and Knits (10.4%), suggesting that customers purchasing Blouses are proportionally more likely to report dissatisfaction.
- Although Dresses generated the largest number of complaints, this is expected because they also attracted the largest number of customer reviews. The Negative Review Rate provides a more accurate measure of product performance than complaint volume alone.
- Overall, customer sentiment remains predominantly positive across the major product classes, indicating that dissatisfaction is concentrated around specific product issues rather than widespread quality concerns.

Executive Insight:

Management should prioritize quality improvement efforts based on the Negative Review Rate rather than the total number of complaints. While Dresses require continuous monitoring because of their high customer volume, Blouses deserve targeted product reviews due to their relatively higher proportion of dissatisfied customers. Product improvement initiatives should focus on addressing recurring concerns around fit, sizing consistency, fabric quality, and overall product appearance, as these themes are consistently associated with negative customer feedback.

Question 5

How does customer satisfaction influence product recommendations?

Findings

Rating Recommendation Rate

- 1 Star **1.9%**
- 2 Stars **6.0%**
- 3 Stars **41.4%**
- 4 Stars **96.7%**

Rating Recommendation Rate

5 Stars **99.8%**

Key Insights

- Recommendation rates increase dramatically as customer ratings improve.
- Almost every customer giving a 5-star rating recommends the product.
- Poor ratings almost always result in customers not recommending products.

Executive Insight:

Improving customer satisfaction is likely to have a direct positive impact on recommendation rates and customer advocacy.

Question 6

Which customer age groups are most satisfied with the products?

Average Rating by Age Group

Findings

Age Group Average Rating

18-24	4.33
55+	4.28
35-44	4.18
45-54	4.17
25-34	4.14

Key Insights

- Customers aged **18-24** reported the highest satisfaction.
- Customers aged **25-34** provided the lowest average ratings.
- Satisfaction remains consistently high across all age groups.

Executive Insight

Conduct additional customer research among the **25-34** age segment to understand their expectations and improve product satisfaction.

What themes appear most frequently in customer feedback?

Findings

Frequently occurring terms include:

- Fit
- Size
- Fabric
- Comfortable
- Beautiful
- Disappointed

Key Insights

- Customers frequently discuss sizing, fit and fabric quality.
- Appearance and comfort strongly influence purchasing satisfaction.
- Negative reviews commonly mention poor fit and disappointing product expectations.

Executive Insight

Improve sizing consistency, product descriptions and fabric quality to reduce customer dissatisfaction and product returns.

Question 8: Which product classes should management prioritise for improvement?

Class Name	Total Reviews	Negative Review Count	Negative Review Rate (%)
Dresses	6319	689	10.9%
Knits	4843	506	10.4%
Blouses	3097	348	11.2%
Sweaters	1428	155	10.9%
Pants	1388	124	8.9%
Jeans	1147	85	7.4%
Fine gauge	1100	105	9.5%
Skirts	945	85	9.0%
Jackets	704	73	10.4%
Lounge	691	48	6.9%

Findings

The analysis indicates that the greatest business impact will come from improving product classes that combine: High customer engagement, Lower average ratings and Higher negative customer sentiment

The tables below highlight the three most reviewed product classes alongside their negative review counts.

Product Class	Total Reviews	Negative Reviews
Dresses	6,319	689
Knits	4,843	506
Blouses	3,097	348

These categories account for the largest share of customer feedback, making them the highest-impact areas for product quality improvements.

Key Insights:

- Dresses received the highest customer engagement with 6,319 reviews but also recorded the highest number of negative reviews (689), indicating that improvements in this category could significantly enhance customer satisfaction.
- Knits generated 4,843 reviews and 506 negative reviews, making it another high-priority category for quality assessment.
- Blouses attracted 3,097 reviews, with 348 negative reviews, suggesting opportunities to improve customer experience while maintaining strong engagement.
- Since these product classes receive the largest volume of customer feedback, even small improvements in product quality, sizing, or fabric could positively impact thousands of customers.

Executive Insight:

Prioritise quality improvement initiatives for Dresses, Knits, and Blouses, as these product classes have the greatest customer reach and the highest volume of negative feedback. Focus product reviews on recurring concerns such as fit, sizing consistency, fabric quality, and overall product appearance. Addressing these issues is likely to improve customer satisfaction, increase recommendation rates, reduce product returns, and strengthen long-term customer loyalty.

Question 9

Which departments should receive additional quality improvement efforts?

Findings

The Trend department recorded the lowest customer satisfaction among all departments.

Key Insights

- The company analyzed 23,486 customer reviews, with an overall Recommendation Rate of approximately 82% and an Average Rating of 4.2/5, indicating generally positive customer experiences.
- Dresses (6,319 reviews), Knits (4,843 reviews), and Blouses (3,097 reviews) generated the highest customer engagement, making them the product classes with the greatest business impact.
- These same product classes also recorded the highest volumes of negative feedback, with Dresses (689), Knits (506), and Blouses (348) negative reviews, highlighting opportunities for quality improvement.

- Customer feedback consistently referenced issues relating to fit, size, fabric quality, and product appearance, while higher ratings strongly correlated with higher recommendation rates.

Key Insights

- Products receiving 4- and 5-star ratings are overwhelmingly recommended, demonstrating a strong relationship between customer satisfaction and customer advocacy.
- Dresses, Knits, and Blouses account for the largest share of customer engagement; therefore, improvements in these categories are likely to deliver the greatest return on investment.
- Review text indicates that fit, sizing consistency, fabric quality, and overall appearance are the most influential factors affecting customer satisfaction.
- Although customer satisfaction is generally high, addressing recurring quality concerns in high-volume product classes will significantly improve the overall customer experience.

Executive Insight:

To strengthen customer satisfaction and long-term loyalty, management should prioritize quality improvement initiatives for Dresses, Knits, and Blouses, as these product classes influence the largest customer base. Specifically, efforts should focus on improving fit accuracy, sizing consistency, fabric quality, and product descriptions to better align customer expectations with the products delivered.

In addition, the company should establish a continuous customer feedback monitoring process using review ratings, recommendation behavior, and sentiment analysis. This will enable early identification of emerging product issues, reduce negative reviews and product returns, and support data-driven product development. By acting on these insights, the company can improve customer satisfaction, increase recommendation rates, and reinforce its competitive position in the women's clothing e-commerce market.
